After a Season of Growth...

G-BiACK took time to bid farewell to its team of interns, who have spent the past few months contributing to various projects across the organization. Field demonstrations, work coordination, community engagement, just to mention a few, the interns played a key role in supporting G-BiACK's mission. The valuable experience and a deepened commitment to agroecology and community-based development won't go forgotten. ALL THE BEST TEAM, VIVA!!!

Is Your Soil Alive ???

Healthy soil is a living system full of microorganisms, organic matter, and nutrients that support plant life. At G-BiACK, we promote GROW BIOINTENSIVE farming methods that build living, fertile soil over time.

By using composting, close plant spacing, and deep soil preparation, farmers can grow more food in less space while improving soil structure and fertility. These practices help the soil retain moisture, reduce erosion, and increase nutrient availability, making farms more resilient to climate shocks.

Planning

G-BiACK Sets Bold Vision in 5-Year Strategic Planning.

The Grow Biointensive Agriculture Centre of Kenya (G-BiACK) held a strategic planning and work session laying the foundation for its next five years of impactful work with smallholder farmers across Kenya and beyond. Discussions centered on scaling farmer training, improving seed sovereignty, deepening youth involvement, enhancing sustainability practices, and building stronger regional networks in agroecology.

With the 5-year strategic direction now in place, G-BiACK is stepping into the future with renewed commitment to building healthy soils, healthy food, and healthy communities all rooted in local knowledge and sustainable practices.

Happening today and tomorrow.

Today at the G-BiACK Centre, a training session is underway. The session is being led by G-BiACK's team to Farmers from SADA Kenya. Fredrick Onyango, the founder of Sustainable Agro-ecological Development Action (SADA Kenya), third from right, has led his farmers to this training with the focus of the training on practical agroecological practices, with a particular emphasis on sustainable farming methods that enhance soil health, increase food sovereignty, and build climate resilience.
