## Makueni County Ministry Agriculture Team Visits GBIACK for Agroecology Field Learning (Feb 26–27, 2026)

The Makueni County Ministry of Agriculture team visited the GROW BIOINTENSIVE Agriculture Center of Kenya for a two-day agroecology field learning session from February 26–27, 2026. The visit focused on practical exposure to Grow Biointensive techniques, including soil preparation, composting, seed saving, and sustainable crop management. During the field sessions today, participants engaged directly with demonstration plots, explored approaches to strengthening local seed systems, and discussed how agroecological practices can enhance food sovereignty and resilience among smallholder farmers.

## New Satellites Joining Every Training Cycle

Every time we train farmers from different parts of the country, they become our satellites. After the training, they return home equipped with practical skills, new ideas, and renewed confidence. They apply what they have learned on their own farms, demonstrate it to their neighbors, and guide others demonstrate it to their neighbors, and guide others who are

interested in improving their production. In this way, knowledge does not remain in one place. It moves from farm to farm and from community to community. Each trained farmer becomes a strong point in our growing network, helping to promote better farming practices, seed saving, soil care, and sustainable food production.

They also share feedback from the ground, helping us understand local challenges and opportunities. As we continue training farmers in different regions, our network spreads wider and becomes more connected. We are strengthening a national movement of farmers working together to build resilient communities and secure healthy food for the future.
